**‘Shelf-life’ Certificate
WD-40 Multi-Use Product**

To whom it may concern,

This letter refers to the ‘shelf-life’ of the WD-40 Multi-Use Product as supplied by the WD-40 Company Ltd.

The term ‘shelf-life’ is considered to be the minimum period of time for which a product stored correctly in the original and unopened container is expected to perform in line with the original manufacturing specification. However, product will often perform as expected for considerably longer.

These products are of a robust nature and manufactured to a high caliber, and should continue to perform as expected for an almost indefinite period of time. However, actual performance can be affected by the limitations of the componentry. As such the shelf-life can vary between products, details are in the table below:

Product Name	Shelf life
WD-40 Multi-Use Product	5 Years

For optimum performance it is essential that these products are stored correctly as follows:

- Away from direct sunlight and extremes of heat, avoiding both high and low temperatures
- Avoid damp and / or humid conditions
- Ensure that the product is kept in the original container and that this is undamaged
- Keep the container securely closed when not in-use
- No contaminants or debris allowed to enter the container

Kind Regards,

Dr Alina Darragh
